

MARGIT VIIGI

FULL-STACK DEVELOPER TO-BE

EDUCATION

- **Junior software developer** 2024-
Tartu Vocational College
About to finish my second year. Other than programming, I also learned project management, web design, databases, communication, digital technology, testing and more.
- **Radiographer** 2019 - 2023
Tartu Applied Health Sciences University
I still carry first aid kit and can name every bone and organ in human body in Estonian, English and Latin. I am also trained to recognize medical emergencies.
- **High school - specialized in art** 2011- 2014
Tartu Kunstigümnaasium
I can draw pretty well and it translates in my current career path as being decent at web design.

WORK EXPERIENCE

- **Junior developer** 2025-Feb 2026
Babooked Solutions OÜ
Had the best experience at my first job as a software developer as I
 - got better at my job every day - solved increasingly complex tasks and got more responsibility as time went by
 - was hired to do front-end development, but ended up getting a comprehensive, full-stack experience as I got to contribute in every phase from product design to monitoring to even meeting with clients
 - leveraged AI-assisted development tools to accelerate sprint cycles and optimize code refactoring without losing control of my code
 - got great experience of working in development team.
- **Radiographer** 2019 - 2023
Tartu Ülikooli Kliinikum
That makes me a good candidate because I
 - developed resilience in a high-stress work environment;
 - learned communication in difficult situations;
 - have tech background, as I used different databases and several very specific software solutions daily
 - have experience in handling sensitive data with care and precision.

SKILLS

● Front-end

HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS

● Back-end & databases

Node.js, Express, REST APIs & CRUD, SQL, MongoDB

● Languages

JavaScript, TypeScript, Java, Python
